Horizontal Storage Solutions

Introduction

We have two options available for horizontal standard storage.

This is the aluminium Planorama or the steel Planchest.

The Planorama conservation storage system incorporates removable drawers, allowing the user to study and document items, without unnecessary handling. Being a bespoke product this is made to order and is on the higher end of the budget.

The more affordable Planchest, is aesthetically attractive and it is particularly suited to situations where the unit is to be mounted on a mobile base, or where there are space constraints that might limit the opening of the drawers.

PLANORAMA

Planorama® archival and display system

Made from inert anodised aluminium, Planorama® is a bespoke, archival drawer cabinet system. It can be built to almost any size and configuration with drawers that can range in depth from 10mm to as deep as required.

- lightweight giving low floor loading
- space efficient with only 2mm required between drawers
- drawers larger than AO can be supplied
- dust brushes fitted to every drawer
- standard finish in natural silver but can be anodised or powder coated to your specification
- systems can be fitted with a glazed top for display purposes
- drawers can be fitted with secure lockable glass tops

Planorama

Planorama® archival + display system Made from inert anodised aluminium, Planorama® is a bespoke, archival drawer cabinet system.

It can be built to almost any size and configuration with drawers that can range in depth from 10mm to as deep as required.

- lightweight giving low floor loading
- space efficient with only 2mm required between drawers
- drawers larger than AO can be supplied
- dust brushes fitted to every drawer
- standard finish in natural silver but can be anodised or powder coated to your specification
- systems can be fitted with a glazed top for display purposes
- drawers can be fitted with secure lockable glass tops

Planchest

We have two ranges available for horizontal standard storage the ROLLA which has flush fronted drawers with handles formed from the drawer front. It is aesthetically attractive and it is particularly suited to situations where the unit is to be mounted on a mobile base, or where there are space constraints that might limit the opening of the drawers.

The TARRA features attractive chrome or recessed handles and is both functional and aesthetically appealing. Drawer extension is 80% as a standard. Both plan chest ranges are available as a standard in A1 and A0 size with bespoke sizes also available. We can produce single units and multiple smaller units can be stacked to create a larger unit, which is beneficial where access for installation is limited.
